

To Whom It May Concern,

Computer Census™

Are you a Small Business Technician that is looking for an easier way to collect Operating System, Hardware and Registered Software information?

Don't spend \$100's if not \$ 1,000's of Dollars.

***Computer Census™* is the asset inventory tool for you!**

LAD Enterprizes, Inc. would like to introduce you to ***Computer Census™***, a transportable computer system tool that enables technicians to automatically inventory a single computer, a list of computers, or an entire domain network.

Computer Census™ queries a local or remote computer for data, and then captures that data to a text file and an Access database file for each computer. These formats permit further analysis using Microsoft Office applications or other programs able to read these popular file formats. When running, status and progress reports are provided in a command prompt window and a log file is written. All file output is written to the "My Documents" folder (automatic folder re-direction is supported). Because ***Computer Census™*** uses standard Microsoft Windows® operating system technologies to inventory and report, no local installation is required, just the presence of the ***Computer Census™*** executable file CC.exe.

The key benefits of ***Computer Census™*** are:

- Ease of use.
- Data collection for over 200 data points is performed in minutes, if not seconds.
- No special equipment or additional software is required.
- Extracted data is captured to text file (.txt) and Access database (.mdb) formats.
- **Low cost – \$95.00** for an unlimited number of computers.

The tool enables a baseline inventory of technical assets to be created. This data can assist with:

- Technical troubleshooting and maintenance
- Planning technical upgrades – hardware or software

Computer Census™

Overview Including Product Highlights

Computer Census™ was developed by LAD Enterprises, Inc. for the Small Business Technician to quickly determine how many workstations and servers are in a network installation and collect related technical details. While many such tools are available for use on larger networks supported by permanent onsite staff, we found few options for the small business technician.

When assisting with troubleshooting a single computer, solving network problems, selecting application software, or developing a technology plan, many small and midmarket businesses had limited knowledge or incomplete data pertaining to their technical environment. Often documentation did not exist, was misplaced, or was outdated.

We realized we needed a solution that collected operating system, hardware, and registered software information:

- Quickly, easily, and at low cost,
- As of a point-in-time,
- Enabled manipulation of collected data using off-the-shelf software,
- Did not need to be “installed” on the client computers or servers,
- Needed no special equipment or special software, and
- Could be used over and over again -- as often as needed and at as many different locations as desired.

We were not able to find such a tool to buy that met all these needs. So, we developed **Computer Census™** to accomplish these tasks - a transportable software tool that enables technicians to automatically inventory a single computer, selected computers, or an entire network Domain.

Computer Census™ queries a local or remote computer for data then captures that data to a text file and an Access database file for each computer. These formats permit further analysis using Microsoft Office applications or other programs able to read these popular file formats. When running, status and progress reports are provided in a command prompt window and a log file is written. All file output is written to the “My Documents” folder (automatic folder re-direction is supported). Because **Computer Census™** uses standard Microsoft Windows® technologies to inventory and report, no local installation is required, just the presence of the **Computer Census™** executable file CC.exe.

Computer Census™

Product Highlights

Key Features and Functionality: Easy to use, small footprint, no installation, no agents, runs locally, over 200 operating system, hardware and registered software data points provided in text files (.txt) and an Access database (.mdb) written to "My Documents".

Platform: Microsoft Windows 9x, Me, NT 4.0, 2000, XP, Server 2003 with Internet Explorer 5.0 or later.

Parameters: Ideal for fewer than 50 computers and servers in a network.

Price: \$95.00 for an unlimited number of computers; free upgrades and no annual fees.

Documentation: Frequently Asked Questions and User Manual available for download at <http://www.ladenterprizes.com>.

Availability: Immediately available for download at <http://www.ladenterprizes.com>. Free to inventory up to 3 computers sequentially in a session.

Purchase: A serial number for unlimited use can be purchased at BMT Micro, <http://www.bmtmicro.com/BMTCatalog/win/computercensus.html>.

Data Collected

For each computer data is extracted in these categories:

Operating System:

- Computer System Information
- Product Information
- BIOS
- Operating System
- OS Environment Settings

Hardware Inventory:

- CPU
- RAM
- Motherboard
- Chassis
- Logical (Disk) Drives
- Hard Disk Detail
- Optical Drive Detail
- Tape Drive Detail
- Pointing Device (mouse)
- Keyboard
- Port Connections
- Serial Ports
- Parallel Ports
- USB
- SCSI Devices
- Modem Devices
- Audio Devices
- Video Devices
- Video Adapter Settings
- Installed Printers

Network Information:

- System Network Settings including IP Address/MAC Address/DHCP/DNS/WINS
- System Services such as DHCP-DNS-WINS
- Services and Network Client Services
- Protocols
- Network Adapters
- Shared Resources

Software:

- Base System Drivers
 - Kernel Drivers
 - File System Drivers
 - Adapter Drivers
 - Recognition Drivers
- Registered Software Packages including Hot Fixes and Service Packs
- Registered Applications including available version information

LAD Enterprizes, Inc. Releases Computer Census

LAD Enterprizes, Inc., an information technology consulting company, has released Computer Census, a transportable computer system inventory tool for the small business technician.

West Chester, PA (PRWEB) September 7, 2006 -- Are you a technician looking for an easier way to collect hardware and software information? LAD Enterprizes, Inc. has announced the release of Computer Census Version 3.00.0037, a transportable computer system tool that enables technicians to automatically inventory a single computer, a list of computers or an entire domain network. This time-saving tool, with a price tag of \$95.00, rapidly collects information for the operating system, network, hardware, and registered software, and then stores the information in text files and in an Access database.

"Many small businesses do not know much about their technical environment. Documentation does not exist, is misplaced or outdated. Before a computer technician can reliably service a client we need to assess the current environment. Computer Census enables us to perform a thorough computer assessment and assist with troubleshooting network problems. This inventory tool quickly documents a network at a reasonable cost." states David Burford, Vice President.

Sharewarejunkies (<http://www.sharewarejunkies.com>), awarding their five star rating stated "For the Professional Technician or IT departments with smaller networks it [Computer Census] should be cause for jumping up and down with joy. There are three reasons why, it can inventory remote computers, in other words it can inventory a whole network at once, the amount of inventory information is incredible, and it is really, really fast! ...In conclusion Computer Census is Great!"

"There are a number of inventory tools available at hefty prices for use at a single location or company. When we looked for a cost-effective and reliable tool to use with small businesses, we could not find anything on the market to meet the need. So we developed Computer Census. We felt other technical service businesses would see the benefit of an inventory tool that could be use over and over again." states Laura Dallas Burford, President.

Key Features and Functionality: Easy to use, small footprint, no installation, no agents, runs locally, over 200 data points provided in text files and an Access database written to "My Documents".

Parameters: Ideal for fewer than 50 computers and servers in a network.

Price: \$95.00 for an unlimited number of computers; free upgrades and no annual fees.

Availability: Immediately available for download at <http://www.ladenterprizes.com>. Free to inventory up to 3 computers sequentially in a session.

About LAD Enterprizes, Inc.

LAD Enterprizes, Inc. is an information technology consulting company that assists small and midsize companies with limited or no technology staff. Think part-time Technology Department with all of the knowledge, but none of the overhead. For more information on Computer Census and LAD Enterprizes, Inc. visit <http://www.ladenterprizes.com>.

Computer Census™

http://www.sharewarejunkies.com/06zwd5/computer_census.htm

Type of Program: Utility
Supported Platforms: Windows 9x/Me/NT4/2Kx/XP
Company Name: LAD Enterprizes Inc
Version: 3.00.0037
Price: \$95.00
Installed Size: 552k

Computer Census is a program for computer professionals for diagnosing problems. What it does is it finds out everything about a computer and outputs that information to both a text file and a Microsoft Access file.

Did I say "Everything about a Computer" yep that's what I said and I mean it. Here is what LAD Enterprizes Inc says: Computer Census is a System Information Utility that reports more than 200 key data points: Manufacturer, BIOS, OS, CPU, RAM, Motherboard, Chassis, Drives, Mouse, Keyboard, Port Connections, COM and LPT Ports, USB, SCSI, Modem, Audio, Monitor, Video, Printers, Network Settings, System and Network Services, Protocols, Network Adapters, Shared Resources, Drivers, Registered Software Packages and Applications, Hot Fixes and Service Packs.

And it gets better. First of for the home-user, for you it essentially free. (Free to inventory up to 3 computers sequentially in a session) Next is the size of the program, it will fit on a floppy.

For the Professional Technician or IT departments with smaller networks it should be cause for jumping up and down with joy. There are three reasons why, it can inventory remote computers, in other words it can inventory a whole network at once, the inventory (the amount of information) is incredible, and it is really, really fast! It did my entire computer system with 4 drives and terabyte of storage in less than a minute.

The support is really good too. There is a great pdf manual, plus a Help in the program itself.

In conclusion Computer Census is Great!

Performance: ★★★★★
User Friendly: ★★★★★
Cost: ★★★★★
Ease of Installation: ★★★★★

Computer Census 3.37

This easy-to-use utility quickly collects information to generate a complete report of hardware and registered software, but a single error could confuse many users. Computer Census is an executable that is run from your desktop or through a command line. The utility opens a command window to display its scan progress, but fails to inform users where to find the results. On our test machines, the files were in the My Documents folder. We found it very fast as it gathered information in four areas of our computer: operating system, network, hardware, and registered software part. The most useful result is a complete system report that details operating system data, services, installed printers, network settings, and extensive information hardware data. The information is also saved in a generic database file. Finally, it saves a program activity log useful when multiple machines are inventoried. Computer Census has an extremely small footprint, needs no supporting DLLs to run, and can collect data on every computer in a domain. This trial program is limited to three machines per execution, though. Technicians, system administrators, and all users wanting a comprehensive system report will find this utility very beneficial.

About LAD Enterprizes, Inc.

LAD Enterprizes, Inc. is an Information Technology Consulting company providing network engineering and technical consultative services to small and midmarket companies.

We realized small and midmarket companies had software and technology challenges similar to those in major corporations, but the small and midmarket companies were not being serviced in a similar manner. To them solving a problem is not enough. It must be solved quickly and accurately in a cost effective manner. It must address and solve their business process as well as technology challenges.

Our approach is to place a priority on understanding business needs and goals first, then work with our clients to determine the right technology to support those needs.

Our business as well as technical experience enables us to:

- Focus on the practical application of technology,
- Explain complex concepts in clear, easy-to-understand language, and
- Identify workable technical options.

Because needs of small and midmarket businesses are different, LAD Enterprizes:

- Developed our own proprietary hardware and software inventory tool, **Computer Census™** to assist with technical assessments,
- Developed Technical Assessment, Software Selection and Business Continuity Planning Methodologies tailored for the smaller businesses,
- Provides a Network Reference Manual to our Clients, and
- Is a Microsoft Certified Small Business Specialist.

Our Areas of Expertise:

Network Engineering:

This includes evaluating and then assisting with enhancing and maintaining computer equipment, networks, connectivity and basic technical needs. - Network Technical Assessments and Planning, Local Area Network Implementation, Network Maintenance and Monitoring.

Technical Consultative Services:

This includes Strategic Technical Business Planning, Software Selection and Implementation Assistance, and Disaster Recovery/Business Continuity Planning.

Additional information on LAD Enterprizes Services can be found at www.ladenterprizes.com.

Profiles of Officers

LAURA DALLAS BURFORD, PRESIDENT

Laura Dallas Burford has extensive experience assisting businesses in defining and delivering operational and technology solutions. She understands the steps required to take a strategy from its inception to its implementation and consistently has achieved outstanding results for clients based on her customer focused approach. Her twenty plus years of experience and capabilities are brought together in an approach that enables her to deliver projects on time and within budget.

Prior to starting LAD Enterprizes, Inc., Laura managed a rapidly growing US division of a start-up International Professional Services Consulting organization and turned it into a profitable business. She has had experience with a major consulting organization, start-up initiatives and a number of Top 100 internal corporate accounting and technology divisions. Laura has delivered business process redesign services, system development and technology services as well as front and back office domestic and international outsourcing solutions for clients.

Laura holds a BSC, MA. She is the 2006-2007 Chair for the Chester County Women's Commission, is on the Governing Board for the Innovative Technology Action Group (ITAG), a member of the Greater Philadelphia Senior Executive Group, and is involved with a number of local Chambers of Commerce.

DAVID R. BURFORD, VICE PRESIDENT

David R. Burford, MCP (Microsoft Certified Professional) has significant experience with designing and implementing network and information systems for small businesses. Additionally, he is responsible for delivering LAD Enterprizes' Network Services. With his first programming experience in 1973, David is also responsible for development of LAD Enterprizes' proprietary IT asset inventory tool **Computer Census™**.

David holds a BA, MBA and is a CFA charterholder with significant experience advising executive management in merger and acquisitions and business valuation activities for both public and private businesses. He takes a broad multi-disciplinary enterprise view of companies and their processes, translating that view into measurable and actionable metrics.

Previously he was a commissioned officer on active duty with the United States Army. David has completed his service and is a retired Major.
